

EASY-OFF Socket with Footswitch

Ensure your appliances and equipment are turned off completely, not left in standby mode

Each year we have more and more computers, TV's, Hi Fi equipment, table lamps and other equipment around the home and office.

All this is great, but it pushes our energy costs up and up. The more of these types of products we have the more we leave equipment in standby mode.

The electricity used whilst in standby mode can add up to significant amounts across weeks, months, and years. Often we just leave our items switched on or in standby mode, this is costing us a lot of money and needlessly using energy.

In addition to this, leaving our equipment turned on shortens the life of the product, and also increases the fire risks etc.

The Watts Clever range of Standby Control products helps people and companies to ensure that they turn all relevant equipment fully off.

Our products ensure that this becomes a simple operation and something that will be done automatically, or with the minimum of thought.

Main specifications

- Power rating 10A, 240V
- 2,400 watts maximum load
- 3 metre footswitch cable
- Zero power consumption when off
- Power on/off indicator light
- Fully turns off the power to all connected appliances and equipment
- Allows for easy access to turn off equipment
- No more reaching behind cabinets or under tables
- Saves wasted energy and money
- Easy press footswitch
- Can also be used as a deskswitch
- Can be used with any standard power block

How it works

The standby control socket with footswitch is very simple to use, yet very effective in helping you cut your energy costs.

Additionally this is a great product to make access easy to sockets that are hidden behind cabinets, under tables etc. No more excuses for not turning them off.

Just plug the socket into any normal electricity socket. If you wish to connect more than one appliance then connect any standard 2, 3, or socket power extension block to the standby control socket.

Place the footswitch in a convenient position so that you can access it easily. There is a 3 metre cable to make this easy.

To turn off the power to all the connected equipment simply press the footswitch. The power will be turned off completely.

Press the footswitch again to restore power.
